

## Week6-e.html

1. Modify week6-e.html to produce output as per below. Some of the obvious styles such as text being centered are not stated in the requirements section, but you must implement them in your work.
2. Additional instructions can be found in the comment of the html file.
3. Retrieve relevant images from the *assets/images* folder
4. Watch the sample output video

As user scrolls down the page

To guide you for these tasks, it is best to read the following CSS properties:

- A. Float
- B. Position sticky
- C. Z-index
- D. Nth-of-type

**Aesthetic requirements (unit of measurements for dimension is PX unless stated otherwise)**

1. All images have a dimension of 100 by 120 with surrounding padding of 10
2. All paragraph has surrounding padding of 10 and font size 1.2 times the default
3. The first four images in the document “wrap” around the paragraph elements.
4. The class menu has the following
  - a. Height: 5vh
  - b. Skyblue background color
  - c. Text is centered
5. The class stickit initially remains in its location. As users scroll down, it moves to the top touching the border of the class container
6. The class container has the following:
  - a. Width: 50% of the page
  - b. Height: 95vh
  - c. Container is centered the page
  - d. Vertical scroll bar is present
7. H4 and images that have ID attributes are stacked (three images at the bottom and a text)
  - a. Image with id two: left 50px
  - b. Image with id three: left 100px
  - c. Image with id four: left 150px
  - d. H4 element is left 200px

**Additional task**

Insert the following into your CSS

```
.psuedo>article:nth-of-type(odd){color: lightcoral;}
```

Then comment the above, and insert this one

```
.psuedo>article:nth-child(odd){color: lightcoral;}
```

Can you tell the differences? Write your findings in the reflection.
